# SOUND RAMP SWITCHING PANEL

*Isolate ramp with short by the flip of a switch  
prevent sound short out of entire field*

## REVIEW THESE IMPORTANT FEATURES

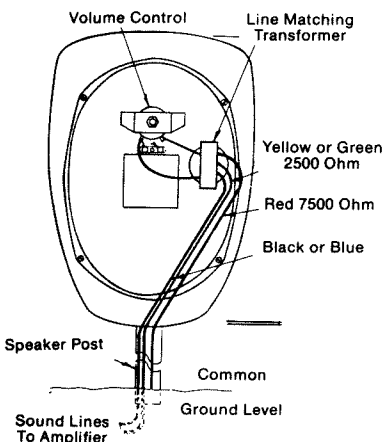

- 100 Ohm load matching variable transformer
- 100 Ohm Load Matching Variable Transformer
- Monitor Matching Transformer
- Pop-out Indicator Fuses Tells You Which Ramp To Isolate
- Pop-out Fuses Prevent Line Interference
- Front Panel Hinged For Easy Access
- Double Pole Switches Prevent Sound Cross Talk Between Circuits
- Terminal Strip Has Screw Pressure Type for Fast Easy Wiring
- Mounting Strip For Ramp Identification
- 30 Double Pole-Single Throw Switches
- Provides Capacity For the Largest Drive-In

No. 9196

WIRE EACH COMPLETE RAMP WITH PRIVATE HOME RUN TO RAMP CONTROL SWITCHING PANEL

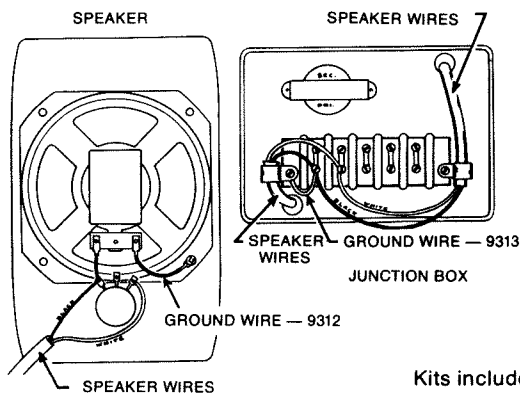

# WIRING DIAGRAMS

Connect 7500 ohm or 2500 ohm transformer lead to sound line as required by amplifier lines for proper impedance match

### IMPORTANT

Parallel all standee speakers to the feeder lines going to the amplifier. Do not wire in series

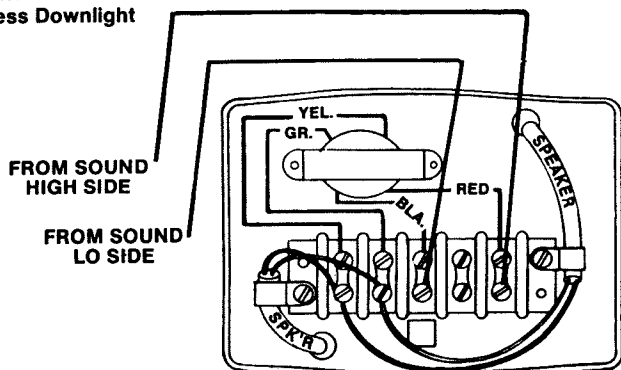

### Sound Cut-off Speaker and Junction Box

Patent No. 3,484,522  
CBX Kit No. 9350  
RCA Kit No. 9252

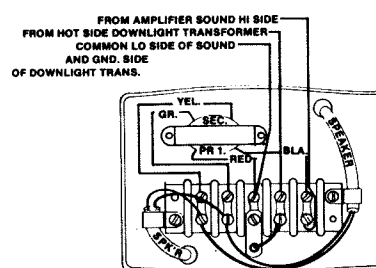

Other Makes  
Kit No. 9251

Kits include special volume control and ground wires

### Circlite Junction Box Less Downlight

### Circlite Junction Box With Down Light

**Note:** Three Wire System For Sound And Downlight Is Suggested For Low Voltage — (28-35 Volts) Only For Downlight.

DRIVE-IN THEATRE MFG. CO., INC.

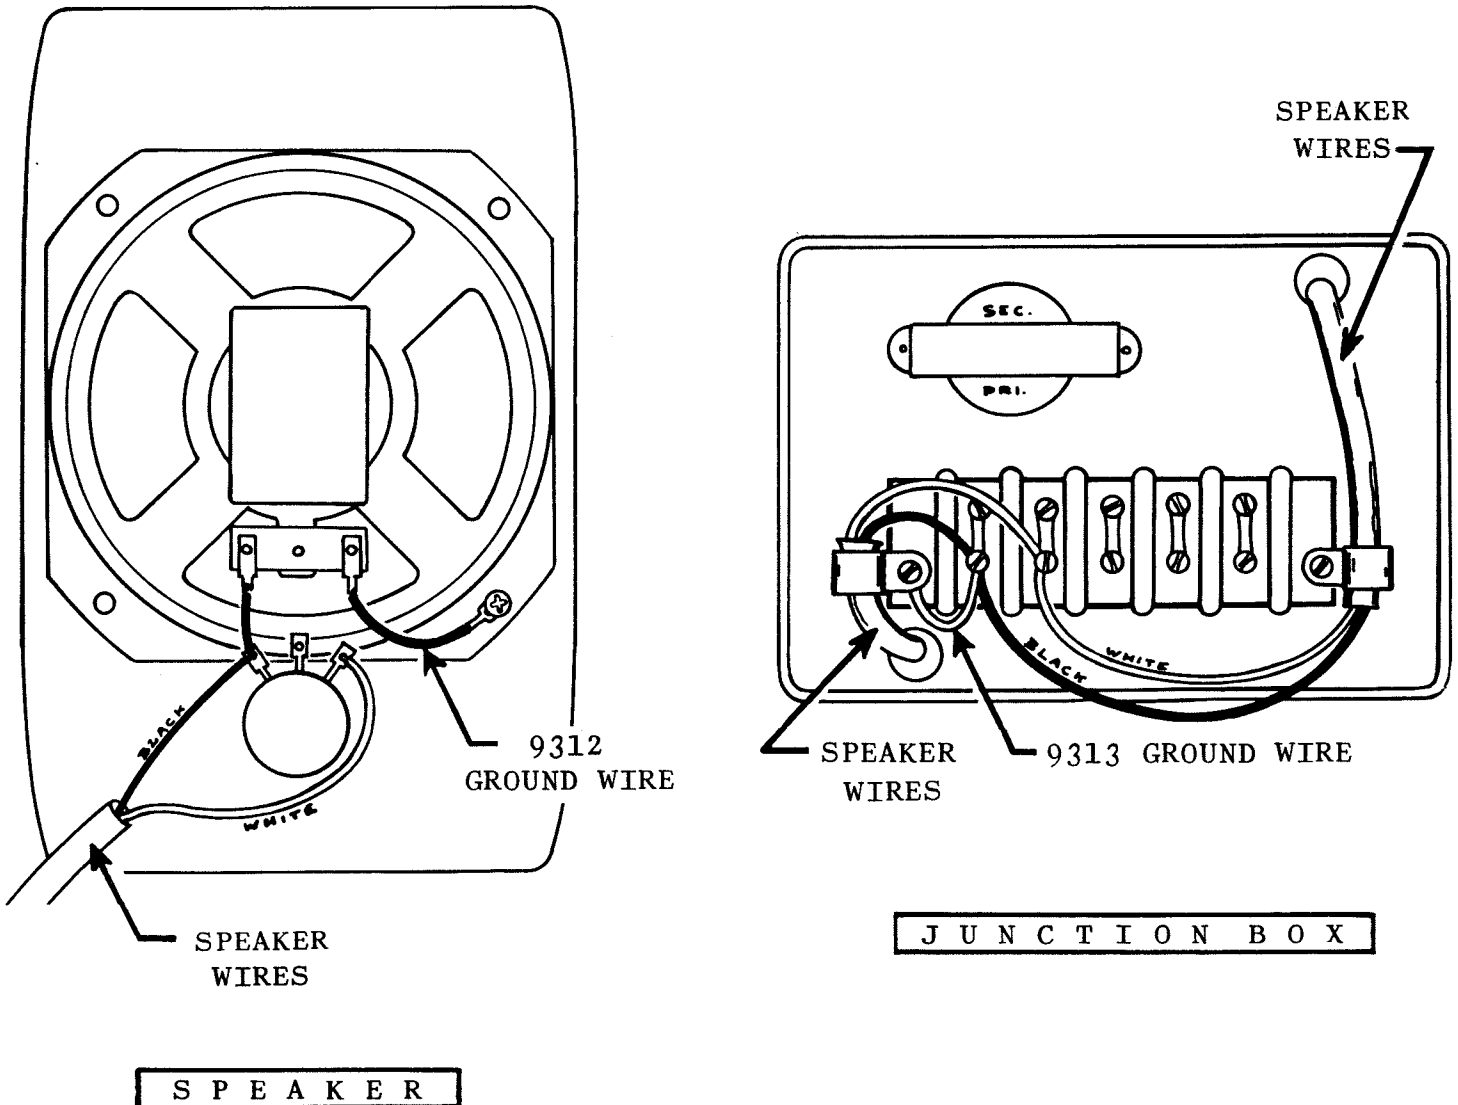

SOUND CUT-OFF SPEAKER AND JUNCTION BOX

WIRING INSTRUCTIONS

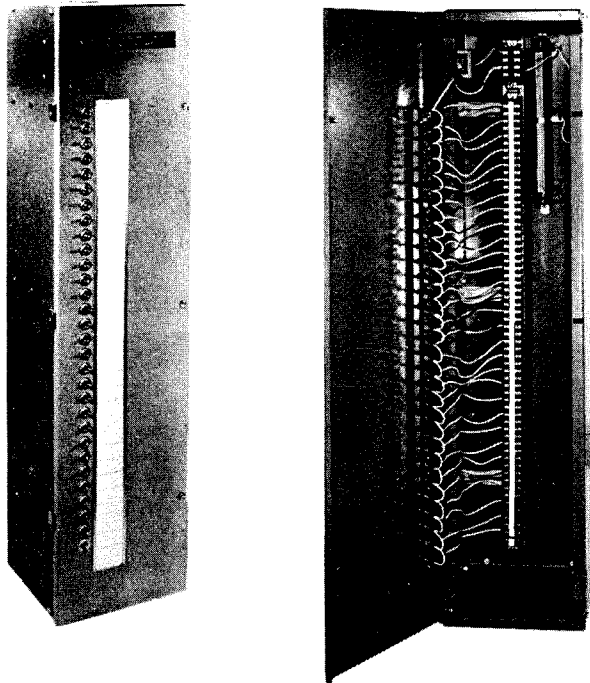

PATENT NO. 3,484,522

CBX Kit No. 9250  
RCA Kit No. 9252  
Other Makes Kit No. 9251

KITS INCLUDE SPECIAL VOLUME CONTROL AND GROUND WIRES

# DRIVE-IN'S SOUND AND DOWN-LITE RAMP CONTROL PANELS

## SOUND RAMP CONTROL PANEL FEATURES

Panel measures 8" x 8" x 36" high and when mounted vertically uses only 8 inches of floor space.

The panel may be mounted horizontally if desired.

Hinged front of panel provides easy access to inside of unit.

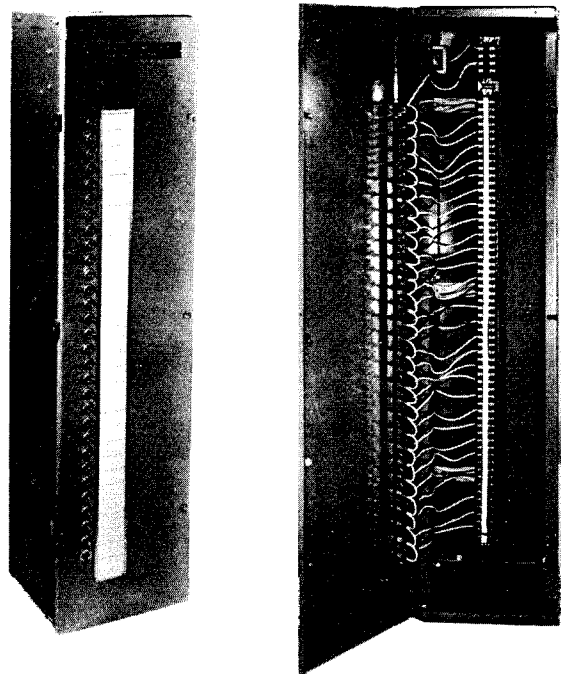

30 double-pole single throw switches provide enough circuits for the largest drive-in.

With 30 circuits the SOUND ramp distribution may be divided into left and right circuits to help locate any possible "ramp shorts".

Using double-pole switches both sides of the SOUND lines are disconnected to eliminate and SOUND crosstalk between circuits.

The terminal block strip (60 terminals) are the latest screw pressure type and eliminate the need for the installation man to bend loops in the wires to install under ordinary screw terminals. Simply strip the "Home Run Wires" with straight terminations and insert into the Terminal Block and tighten screw, thus saving much time in original installation as well as tracing all circuits.

On the front of the panel a cardboard mounting strip is provided to show what ramps are controlled by the various switches. Examples: 4 LEFT, 4 RIGHT, ETC.

## DOWN-LITE RAMP CONTROL PANEL FEATURES

Panel measures 8" x 8" x 36" high and when mounted vertically uses only 8 inches of floor space.

The panel may be mounted horizontally if desired.

Hinged front of panel provides easy access to inside of unit.

30 double-pole single throw switches provide enough circuits for the largest drive-in.

With 30 circuits the DOWN-LITE ramp distribution may be divided into left and right circuits to help locate any possible "ramp shorts".

Using double-pole switches both sides of the DOWN-LITE lines are disconnected to eliminate any shorts between circuits.

The terminal block strip (60 terminals) are the latest screw pressure type and eliminate the need for the installation man to bend loops in the wires to install under ordinary screw terminals. Simply strip the "Home Run Wires" with straight terminations and insert into the Terminal Block and tighten screw, thus saving much time in original installation as well as tracing all circuits.

On the front of the panel a cardboard mounting strip is provided to show what ramps are controlled by the various switches. Examples: 4 LEFT, 4 RIGHT, ETC.
